

Roller Mills

Small | Large

Cracked Corn. Higher efficiency.

Produce cracked corn for your enterprise with amazing efficiency in both space and power.

Available in two sizes with multiple motor size options. Reliable, easy to adjust and customizable roll configurations fine-tuned to your application.

Roller Mills

Crank Out Some Cracked Grain

Beef cattlemen, dairymen, feed mills, to name a few, need a way to efficiently produce high-quality cracked corn. It was that need that spawned the Horning stationary roller mill. Multiple options, and no-nonsense engineering make these units a favorite of many happy owners.

◀ Roll Adjustment in a Cinch

Fine tune the adjustment quickly with our innovative yet simple cinching adjustment on the front of the mill. It is quick and very easy to tweak your setting to just the right gap.

Toothy. Grins.

Choose from a broad offering of tooth configurations to dial in the output to just the perfect consistency. All those options make a fella smile.

Solid as a Rock

Built tough for a long, and productive career, the defining word for these mills is “heavy”. This unit sports dual 1.75” shafts is built from thick sheet steel. Made to stay put and crank it out.

Slide and Flow

The durable hopper design is just big enough but not too large for the ideal kernel flowthrough. An adjustable slide provides optimal adjustment for a nice even feed.

Swap. No Sweat.

No need to dread changing out the rolls, it's as easy as falling off a log. Quick access. Clever retaining system. Minimal tools. You'll love it.

One-Year Warranty

This package includes the signature Horning stamp of quality, a one-year warranty on workmanship and materials. This is a machine you can count on.

Roller Mills

A “Small But Mighty” Model

The smaller sized Horning mill is just perfect for small farmers and mills. Featuring a 2 belt drive with output volumes from 250 to 330 bushels per hour, his fella packs a big punch for its size. Available with a 5HP single phase or three phase motor, it can be customized for a host of applications.

shown with optional motor

RM1810 Small Roller Mill Model Specs:

Dimensions:

26"W x 35"D x 39½" to 45½" H (adj. height)

Weight: 448lbs w/o motor

Discharge Hopper Clearance:

8.42" to 14.42"

Motor: 5HP - 1ph or 3ph

Rolls: 4, 6, 8 or 10 groove rolls

Shaft: 1.75 " Shaft

Drive: 2 belt drive

(no chains & sprockets to maintain)

Roll size: 8.5" dia x 10" wide rolls

Dry Corn Capacity:

6-cut: 330 bu/hour

8- cut: 260 bu/hour

10-cut: 250 bu/hour

Small Grain Capacity:

Approx 30% less then dry corn

Motor & roll grooves need to be specified per order

Roller Mills

A “Big Hoss” Model

This model will take production to the next level. Three belts propel the drive on this “clydesdale” and it boasts output volumes between 400 and 800 bushels per hour. It is available with either a 10HP single phase or a 15HP three phase motor.

shown with optional motor

RM1824 Large Roller Mill Model Specs:

Dimensions:

40”W x 42”D x 40¾” to 46¾” H (adj. height)

Weight: 765lbs w/o motor
